

PC12 Flush Diaphragm Pressure Sensor with Thread

Features

- Flush diaphragm pressure sensor with thread structure
- Imported highly reliable pressure die
- A single time silicon oil isolated filling technology
- Compensation board filled with glue for protection against moisture
- All stainless steel housing material
- High accuracy, high reliability
- Strong anti-interference, good long-term stability
- 18 months warranty period

Applications

- Medical, food industry
- Environmental protection, chemical, coating
- Polyurethane equipment
- Industry standards supporting

Notes:

- 1 Do not touch the diaphragm with hard objects, which may cause damage to the diaphragm.
- 2 Please read the Instruction manual of the product carefully before installation and check the relevant information of the product.
- 3 Strictly follow the wiring method for wiring; otherwise it may cause product damage or other potential faults.
- 4 Misuse of the product may cause danger or personal injury.

Product overview

PC12 pressure sensor adopts a single time silicon oil filling technology. The diaphragm directly contacts with the measuring medium. The perceived pressure is transmitted to the pressure chip through the silicone oil to generate an electrical signal, and the compensation circuit corrects the pressure signal to a linear pressure signal.

The end face of the thread is directly exposed to the pressure, which can prevent scaling, unsanitary and viscous pressure blockage. It is especially suitable for viscous fluid pressure and liquid level measurement in the medical and food industries. It is widely used in food, pharmaceutical, winemaking and other sanitary industries.

The company can customize products for customers, to make products of special structure and size. We have mature batch production lines, which can ensure production tasks be finished perfectly.

Notes:

- 1 Do not misuse documentation.
- 2 The information presented in this product sheet is for reference only. Do not use this document as a product installation guide.
- 3 Complete installation, operation, and maintenance information is provided in the instructions of the product.
- 4 Misuse of the product may cause danger or personal injury.

Electrical performance parameters

Pressure range	-100kPa~0~10kPa...100MPa
Pressure reference	Gauge pressure, Absolute pressure, Sealed gauge pressure
Excitation	1.5mA recommended for constant current
Input impedance	Constant current: 2kΩ~5kΩ
Electrical connection	Gold-plated KOVAR pin or silicon soft wire
Compensation temp.	Constant current: 0℃~60℃ (≤70kPa), -10℃~70℃ (other ranges);
Operating temp.	-40℃~120℃
Storage temp.	-40℃~120℃
Insulation resistance	≥200MΩ/250VDC
Response time	≤1ms (up to 90%FS)
Measured medium	All the liquids and gases compatible with 316L.
Mechanical vibration	20g (20~5000Hz)
Shock	100g (10ms)
Service life	10×10 ⁶ (cycles)

Structural performance parameters

Diaphragm material	316L
Housing material	316L
Oil filling	Medium chain triglycerides

How to order

Example: PC12-100kG4WI1C1H1T0

PC12 pressure sensor, pressure range 100kPa, gauge pressure, 4 wire, 1.5mA constant current excitation, pressure port M20*1.5, housing port: M25*1, without cooling elements

Ordering tips:

- 1 Pressure range can be selected higher or lower than actual conditions but should be within $\pm 30\%$ FS.
- 2 Pressure reference consists of gauge pressure, absolute pressure and sealed gauge pressure.
 - (1) Gauge pressure is based on the current atmospheric pressure. Generally, it refers to the measurement of pressure which is greater than the current atmospheric pressure. Negative

pressure is a special case of gauge pressure. It refers that there is such working condition that the pressure of work site is lower than the current atmospheric pressure.

- (2) Absolute pressure is based on vacuum.
- (3) As for sealed gauge pressure, it uses absolute pressure die for gauge pressure product based on the atmospheric pressure of production site. For pressure range above 6MPa, gauge pressure cannot be selected, but only sealed gauge pressure.

3 Confirm the maximum overload of the applied system, which should be less than the overload protection limit of the sensor, otherwise it will affect the product life or even damage the product.

4 The commonly used compensation of the product is 1.5mA constant current compensation. Suggest to select the option with priority.

5 The material and process for manufacturing negative pressure sensors are different from those of positive pressure sensors. So gauge pressure sensors cannot be used as substitute of negative pressure sensors.
